*University of Wisconsin Population Health Institute*

*April 5, 2012*

# OUTLINE

---

*Rankings & Roadmaps Overview*

*New Rankings Features*

*County Health Roadmaps*

*Wrap-Up; Q & A*

# THE STORY BEGINS IN 2008.....

# WISCONSIN COUNTY HEALTH RANKINGS

## 2003-2008

# AMERICA'S HEALTH RANKINGS

- ▶ Ranks the overall health of all 50 states, from healthiest to least healthy.
- ▶ Published in 1990 and annually thereafter.
- ▶ Uses a model that summarizes the overall health of each state.

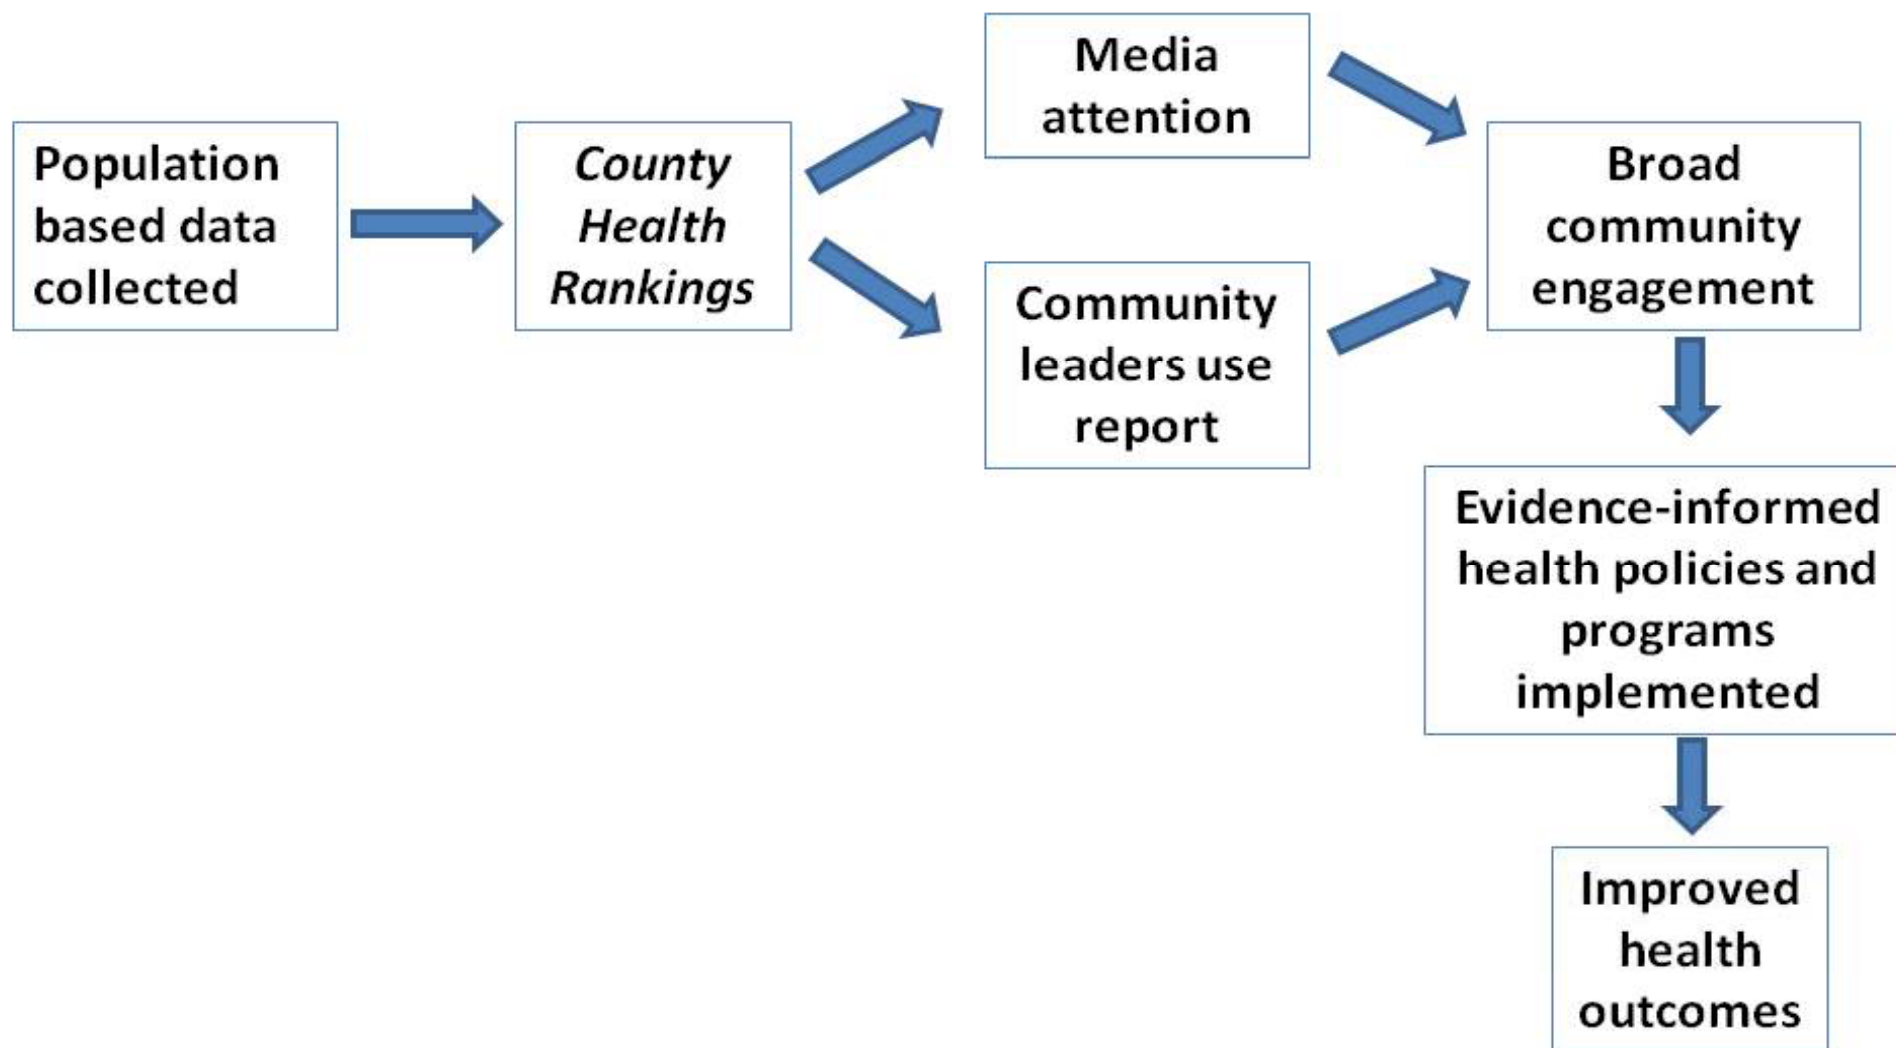

**A Call to Action**  
for Individuals & Their Communities

# County Health Rankings Logic Model

## PLACE MATTERS: KEY MESSAGES

---

- ▶ Where we live, learn, work, and play matters to our health.
- ▶ Having health insurance is important – but much of what affects our health occurs outside of the doctor's office. It's hard to live a healthy life if you live in an unhealthy place.
- ▶ The *Rankings* help counties see how they compare to their neighbors so they can identify where they are doing well, where they need to improve and what steps they need to take to remove barriers to good health.

## MOVING TO ACTION: KEY MESSAGES

---

- ▶ Improving health is everyone's business.
- ▶ Change begins by bringing together community leaders to identify what steps need to be taken to build a healthier community.
- ▶ When you can see how your county compares against another county in your state or against a national benchmark, you can use the information to push for improvement.

# COUNTY HEALTH ROADMAPS

## ROADMAPS to HEALTH

Building your roadmap will provide you with the tools and resources to help make your community a healthier place to live, learn, work, and play.

[BUILD YOUR ROADMAP](#)

### WHAT WE KNOW

#### Programs and Policies >

Effective local, state, and federal policies and programs can improve a variety of factors that, in turn, shape the health of communities across the nation.

#### Health Factors >

Many health factors shape our communities' health outcomes. We look at health behaviors, clinical care, social and economic, and the physical environment.

#### Health Outcomes >

We measure two types of health outcomes to show how healthy each county is: how long people live (mortality) and how healthy people feel (morbidity). These outcomes are shaped by many factors that, in turn, can be influenced by policies and programs.

Children in poverty

What is it

Children in poverty is the percent of children under age 18 living below the Federal Poverty Line (FPL).

Where it comes from

Children in poverty estimates are provided by the Small Area Income and Poverty Estimates (SAIPE) program through the U.S. Census.

Reason for ranking

Poverty can result in negative health consequences, such as increased risk of mortality, increased prevalence of medical conditions and disease incidence, depression, intimate partner violence, and poor health behaviors. While negative health effects resulting from poverty are present at all ages, children in poverty greater morbidity and mortality due to an increased risk of accidental injury and lack of health care access. Children's risk of poor health and premature mortality may also be increased due to the poor educational achievement associated with poverty. The children in poverty measure is highly correlated with overall poverty rates.

## DATA DRILLDOWN GUIDE

### Using Your Snapshot

The *County Health Rankings* provide a snapshot of a community's health and a starting point for investigating and discussing ways to improve health. Beyond the measures provided in the snapshot and Additional Measures sections of this web site, other community health data are available from national and state organizations. This guide helps you navigate the information in your county's snapshot and identify key areas where you may wish to look for additional data. It also directs you to additional national and state data sources. (Be sure to check out the [Exploring the Data](#) section so that you do not miss any of the information in our site.)

#### First, look at your Health Outcomes ranks and measures:

- How does your county rank and how do your measures compare to your state averages? To the national benchmarks? Keep in mind that each measure has a confidence interval or error margin surrounding it—if a measure is above the state average AND the state average is beyond the error margin for your county, then further investigation is recommended. Likewise, if a measure is below the state average AND the state average is below the error margin for your county, this is a measure of strength in your community.
- Identify where your county is doing well. For example, does your county have a low rate of premature death compared to your state average. Also, identify where your county may need to improve. For example, does your community have high rate of low birthweight babies? If so, think about and investigate other sources data that you may need to better understand what is going on in your community regarding low birthweight babies.

#### Next, look at your four Health Factors ranks:

- Is there one area where the rank is much lower than the others? If so, this may be a good place to start. Keep in mind that each area carries a different weight so before picking a focus area too quickly, consider both your relative rank and the population health.
- Once you have identified one or more of the Health Factors to examine more closely, how do your county's measures compare to your state averages? Again, keep in mind that each measure has a confidence interval or error margin surrounding it—if a measure is above (or below) the state average AND the state average is beyond the error margin for your county, then further investigation is recommended. And again, if the measure (and error margin) are better than the

## ASSESS NEEDS & RESOURCES

One of the first steps in local health improvement is to take stock of your community's needs, resources, strengths, and assets. You will want to understand what helps as well as what hinders progress toward improving your community's health.

ASSESS

### Purpose

Understand current community strengths, resources, needs and gaps to help you decide where to focus your efforts.

### Who to Involve

Multi-sector team of partners (including leaders and stakeholders from business, healthcare, education, government, public health, funders, and community organizations) as well as anyone who cares about or is affected by health issues in your community

### What to Do

Review the descriptions below and expand the most relevant sections to find the activities and tools for your community.

#### + Start

We need to collect data, but we aren't sure where or how to start.

#### + Act

We are collecting a variety of data, but we could use some help interpreting what it means and moving forward.

#### ◀ Previous Step

Review activities, tools and resources from WORK TOGETHER.

#### Next Step ▶

Now that you've assessed your needs and resources, it's time to start thinking about how you will FOCUS ON WHAT'S IMPORTANT.

## - Start

We need to collect data, but we aren't sure where or how to start.

### Key Activities

- Review your *County Health Rankings* snapshot
- Define your community
- Generate questions about your community
- Identify measures and sources of data that will help you answer questions about your community
- What's missing? Identify any additional qualitative and quantitative sources of data that will help answer your questions (e.g., focus groups, community surveys)
- Collect information

### Tools

- *County Health Rankings & Roadmaps* Data Drilldown
- *A Handbook for Participatory Community Assessments* (PDF from the Alameda County Public Health Department)
- *Developing a Plan for Identifying Local Needs & Resources* (from the Community Tool Box)
- *Assessing Community Needs and Resources* (from the Community Tool Box)
- *Community Assessment Tools* (PDF from Rotary International)

Find more tools in the [Assess Needs & Resources: Start Guide](#)

Get Help from the *Rankings & Roadmaps* team

## ASSESS NEEDS & RESOURCES: START GUIDE

### Key Activities

- Review your *County Health Rankings* snapshot
- Define your community
- Generate questions about your community
- Identify measures and sources of data that will help you answer questions about your community
- What's missing? Identify any additional qualitative and quantitative sources of data that will help answer your questions (e.g., focus groups, community surveys)
- Collect information

### Review your *County Health Rankings* snapshot

The *County Health Rankings* provide a snapshot of a community's health and a starting point for investigating and discussing ways to improve health. Start by reviewing your county snapshot along with the [County Health Rankings Data Drilldown Guide](#).

To find your county snapshot, go to [www.countyhealthrankings.org](http://www.countyhealthrankings.org) and select your state from the map, then your county (or enter your county name in the Search box). From your snapshot, you'll be able to review data used to calculate your county's current *Rankings*. Snapshots also include Additional Measures with data that is not used to calculate your county's rank but is useful to further understand your community.

The [County Health Rankings Data Drilldown Guide](#) will help you interpret the data included in your snapshot and think about additional questions and sources of data.

### Suggested tools:

- [County Health Rankings Data Drilldown Guide](#) provides suggestions for finding more detailed information about key areas in your community's rankings.

## COMING ATTRACTIONS

---

- ▶ Expanded webinar series focusing on action
- ▶ Searchable database of evidence-informed policies and programs organized around the *County Health Rankings* model—coming June 2012

Home

## COUNTY HEALTH ROADMAPS

### Roadmaps to Health

## ROADMAPS TO HEALTH COMMUNITY GRANTS

The Request for Proposals for the second round of *Roadmaps to Health* Community Grants is now [available](#).

The *Roadmaps to Health* Community Grants, which support two-year state and local efforts among policymakers, business, education, health care, public health and community organizations, are managed by [Community Catalyst](#), a national consumer health advocacy organization.

These grantees are working to create positive policy or systems changes that address the social and economic factors that impact the health of people in their community.

The grantees will build on the RWIE/UWPHI *County Health Rankings* model, which highlights the critical role that factors such as education, jobs, income, and our environment play in influencing how healthy people are and how long they live. The *Roadmaps to Health* community grantees are working to create healthier places to live, learn, work and play.

***Brief proposals due 5/2/12***

**\$200,000 for up to 24 months AND \$200,000 in matching funds (at least 50% cash; balance in-kind)**

## ROADMAPS to HEALTH

Building your roadmap will provide you with the tools and resources to help make your community a healthier place to live, learn, work, and play.

[BUILD YOUR ROADMAP](#)

### WHAT WE KNOW

#### Programs and Policies >

Effective local, state, and federal policies and programs can improve a variety of factors that, in turn, shape the health of communities across the nation.

#### Health Factors >

Many health factors shape our communities' health outcomes. We look at health behaviors, clinical care, social and economic, and the physical environment.

#### Health Outcomes >

We measure two types of health outcomes to show how healthy each county is: how long people live (mortality) and how healthy people feel (morbidity). These outcomes are shaped by many factors that, in turn, can be influenced by policies and programs.
